

litoria consulting is a specialised environmental consulting firm, with professional capabilities in the areas of environment, economics and planning. We assess project constraints and opportunities, advise clients on their risks and requirements, create solutions to move our clients forward and research new strategies and solutions. We pride ourselves on having a flexible approach, modifying methods to create tailored project outcomes for individual client needs.

Our focus at litoria consulting is on sustainability; incorporating ecological, social and economic goals. Our collaboration and involvement in peer-reviewed research, together with environmental practice is part of our approach to sustainable development. Linking theory and practice allows litoria to translate the latest environmental and economic research into sustainable development outcomes.

Since 2008, litoria consulting has been successfully involved in the design and delivery of projects valued at more than half a billion dollars, from affordable housing to State infrastructure to the resources sector. The knowledge and practical experience of our people provide clients with the best possible outcomes for both their project and the environment.
